

ECHOCARDIOGRAM REPORT - December 2024

Patient Information

Name: Tunde Bakare

DOB: 14 May 1990 | Age: 34 yrs

Patient ID: PAT-0001 | Date: 20 Dec 2024

Hospital: LUTH, Lagos | Ref: ECHO-2024-0887

Examination: Transthoracic Echocardiogram (TTE)

Indication: Hypertension follow-up, exertional dyspnoea.

Views obtained: Parasternal long-axis, short-axis, apical 4-chamber,
apical 2-chamber, subcostal.

Measurements

Left Ventricular EDD : 50 mm [Normal <56 mm]

Left Ventricular ESD : 33 mm [Normal <40 mm]

Interventricular Septum : 10 mm [Normal 6-12 mm]

Posterior Wall Thickness : 9 mm [Normal 6-11 mm]

Left Atrium : 38 mm [Normal <40 mm]

Ejection Fraction (Simpson): 64% [Normal > 55%] PRESERVED

Aortic Root : 31 mm [Normal <37 mm]

Findings

- Normal left ventricular size and systolic function.
- No regional wall motion abnormalities.
- Mild concentric left ventricular hypertrophy consistent with hypertension.
- Mild mitral regurgitation (trace) clinically insignificant.
- No pericardial effusion. Valves structurally normal.

Conclusion

Preserved LV systolic function. Mild LVH secondary to hypertension.

Continue antihypertensive therapy and follow up in 12 months.

Dr. Adaeze Nwosu Cardiologist, LUTH Lagos | 20 Dec 2024
